

#### **Look no Further**

## Urinalysis has become an indispensable tool in healthcare.

- Provides important markers to detect early stages of many disease states, such as diabetes, kidney disease and urinary tract infections.
- Enhances disease monitoring and patient management.
- Semi-quantitative results have proven to be cost-effective and virtually immediate.

In today's busy physician's office environment, interruptions are frequent and can contribute to timing errors and variability in results when urinalysis strips are read visually.

Studies have shown that when urinalysis is performed with an instrument, sensitivity is increased and positives are correctly identified and reported.(1)

# The new Clinitek Status® Analyzer provides a positive impact for both staff and patients.

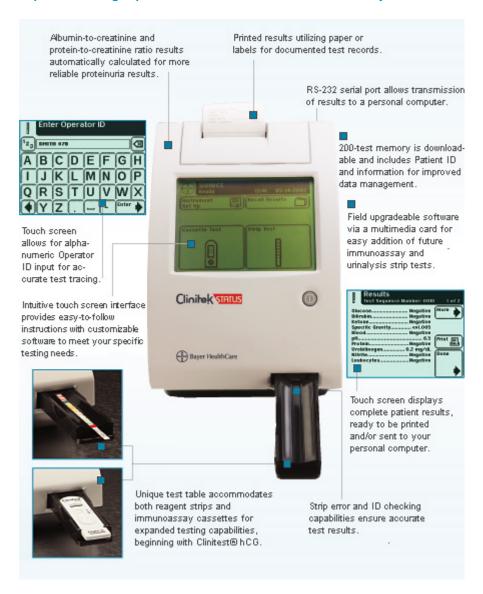

It's been proven that Bayer's instrument-read results provide an advantage for both the busy practice and patient.

- Clinitek Status Analyzer readings eliminate the subjectivity of color interpretation.
- Printed results save time and minimize errors associated with transcription.
- The testing process is streamlined increasing overall efficiency.

With the Clinitek Status, urinalysis testing is simpler and more reliable.

"...the Analyzer will give confidence to the nursing staff and physicians...as the standard of testing and efficiency improves..."(2)

## Expanded testing capabilities with the new Clinitek Status Analyzer.

# **Product Specifications**

# **Intended Use**

- The Analyzer is for in vitro use in the semi-quantitative detection of albumin, bilirubin, blood (occult), creatinine, glucose, ketone (acetoacetic acid), leukocytes, nitrite, pH, protein, specific gravity and urobilinogen in urine samples, depending on the type of Bayer urinalysis strip used.
- The semi-quantitative calculation of albumin-to-creatinine and protein-tocreatinine ratios in urine samples, when Clinitek® Microalbumin and Multistix PRO® Reagent Strips for Urinalysis are used.
- The detection of human Chorionic Gonadotropin (hCG) in urine samples, when Clinitest® hCG cassettes are used.

## **Instrument Memory**

- 200 Patient test results, including Operator Identification.
- 200 Patient details, including name and/or Patient Identification.

#### **Interface**

User: Touch screen display; alphanumeric input; password protection.

Computer: Results are sent to a personal computer via a RS-232 serial port

using a 9-pin null modem cable.

#### **Power Requirements**

• 110V AC +/- 20% 45-65 Hz.

 Battery powered operation (optional) 6 AA non-rechargeable alkaline batteries, not included.

## **Dimensions/Weight**

Depth: 10.7 inches
Width: 6.7 inches
Height: 6.2 inches

Weight: 3.65 lb

(Clinitek Status Analyzer only without batteries or power supply)

## **Operation**

Temperature 41°F - 104°F

Range:

Humidity Range: 20% - 80% Relative Humidity, non-condensing

Calibration: Automatic, self-calibrating

#### **Table of Results**

The results shown in shaded areas will be marked as positives, if "mark positive results" is selected in Instrument Set Up. The results will be marked by asterisks when displayed, when printed and when the data is transferred to a host computer.
